

# SENSCY CASE STUDY

## Aircraft Precision Products

About six years ago, Aircraft Precision Products was hit with a ransomware attack. The cyberattack exploited remote desktop software that the company had set up. Recently, they decided to hire a cybersecurity firm to improve their cyber hygiene and take the right steps to prevent future attacks.

Aircraft Precision Products makes specialty parts for jet aircraft engines. Its largest customers are GE Aviation, Rolls Royce, the Department of Defense (DOD), and Pratt & Whitney, along with several overseas customers. APP plans to use the work with SensCy to differentiate their company.

### Bill Henderson, President of Aircraft Precision Products, on his experience with SensCy

“The advice they give us makes a lot of sense. Some of the other organizations we dealt with didn't understand the subject matter particularly well.”

“The SensCy management and customer support teams were very easy to work with and very professional.”

“What appealed to us was SensCy's business model, which really is focused on small and medium-sized businesses.”

“The SensCy team lives and breathes cybersecurity and they clearly understand what they are talking about.”

“They seem to understand the financial constraints that smaller businesses have.”

“I describe SensCy as the real deal. They do exactly what they say they're going to do and they do it very well.”
